DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/5/06 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 23-26 and 28-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Admitted Prior Art (APA) in view of Loh and Fullerton.

The APA electronic device and accessory as being discussed in the background of the instant application lack a support element mounted on one of said electronic device or said accessory for supporting the accessory when it is in operational connection to the electronic device.

Loh discloses an electronic device 10 comprising an accessory connector 16 for connecting accessory 20 to the device, wherein the device comprises a support element

Art Unit: 2839

14, which is arranged to support the accessory connected directly to the accessory connector. It is also noted that the support element 14 of Loh is arranged to turn in respect of the base part of the device and that the accessory 20 slide with respect to the support element.

Fullerton discloses electronic device comprising an accessory connector 20 for connecting accessories to the device, wherein the device comprises a support element 12, which is arranged to electrically the accessory 10 to the accessory connector. It is noted that the support elements of Fullerton is arranged to turn in respect of the base part of the device.

Therefore, it would have been obvious for one of ordinary skill in the art to provide a support element mounted on one of said electronic device or said accessory for supporting the accessory when it is in operational connection to the electronic device for the APA electronic device and accessory in view of the teachings of Loh and Fullerton.

Providing a separate support element would provide support and protection for the accessory and mating connectors from damaging un-wanted forces.

Allowable Subject Matter

4. Claim 27 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 2839

5. The following is a statement of reasons for the indication of allowable subject matter: The recited limitation wherein the support element is mounted for sliding or pivotal motion on the electronic device in combination with the limitation of wherein the support element is moveably attached to the electronic device and in combination with base claim 23 is not being disclosed or suggested by the prior art of record.

Response to Arguments

6. Applicant's arguments with respect to claims 1-15 and 17-22 have been considered but are moot in view of the new ground(s) of rejection. Also, the argued claims having been canceled by applicant's amendment.
